

Summer Internship Programs

2025-2026

The [Student Research Internship Program](#) and [Medical Student Research Internship Program](#), hosted by the Scripps Research Translational Institute (SRTI), supports cutting-edge translational research focused on personalized health care through the genomic, proteomic, and metabolomic correlates of health and disease. Its primary goal is to equip students interested in health sciences, statistics, and computational or computer science to become future leaders in translational medical research.

Scripps Research's [Summer Undergraduate Research Fellowship](#) and [Research Awareness for Community High schools \(REACH\)](#) programs introduce students to contemporary issues in biomedical research while providing hands-on laboratory experience and mentorship. A core tenet of the programs is their commitment to increasing the number of talented students who pursue careers in the biological and chemical sciences.

These internship programs enable students to explore their passions for science.
